Whiteout Hover Documentation
Last Updated: 10/31/2014

Introduction
This is documentation for whiteout hover. Hovering over it with your mouse will alter its appearance to create a semi transparent white out over the image. It works for images only.

Using the CSS
Open the page you want to add whiteout to and view the HTML source. At the very top of the page, copy and paste the following stylesheet code:

```html
<style type="text/css">
.ots_img
{
    display: inline-block;
    text-align: center;
    width: 100%;
}
.ots_img img
{
    opacity: 1.0;
    filter: alpha(opacity=100); /* IE8 and earlier */
    margin-left: 1.5px!important;
    margin-right: 1.5px!important;
}
.ots_img img:hover
{
    opacity: 0.6;
    filter: alpha(opacity=60); /* IE8 and earlier */
}
</style>
```
**Corresponding HTML**

Once the CSS is in place, the following HTML will create the image:

```
<p class="ots_img"><a href="Your Link Here" target="_blank"><img alt="" src="Image Link Here"/></a></p>
```
